

THE HOOF SHOE OF THE FUTURE

3d printed, without nails, glue
or clamps

The hoof shoe is unique and patented

THE OPENING

keeps the hoof in place

- *Easy to apply for anyone*
- *Perfect fit*
- *Weighs only one-fifth of an iron shoe*
- *Do not chafe or squeeze any soft tissues*
- *The shoe can be spiked*
- *Different soles to choose from depending on activity*

The hoof shoe fits ALL horses

- *The shoe does not reach the soft tissue around the hoof, it only sits on the hoof capsule*
- *The shoe is attached with a puzzle lock*

Every shoe is custom made for each hoof

The palmar/plantarside of the shoe is shaped like a traditional iron shoe, but is custom made based on each horse's individual hoof shape.

It can also be further adapted during rehabilitation.

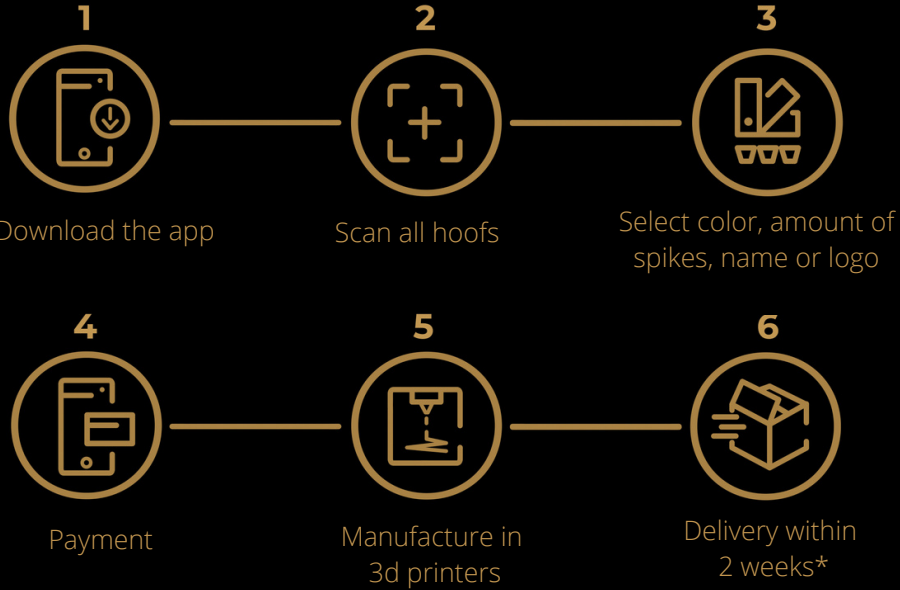

It can't get easier!

The shoe allows the hoof to naturally expand and contract as the horse moves. All shoes are printed in 3D and are adapted to each hoof, which is advantageous even during rehabilitation.

THE HORSE SHOE OF THE FUTURE FOR THE HORSE'S BEST

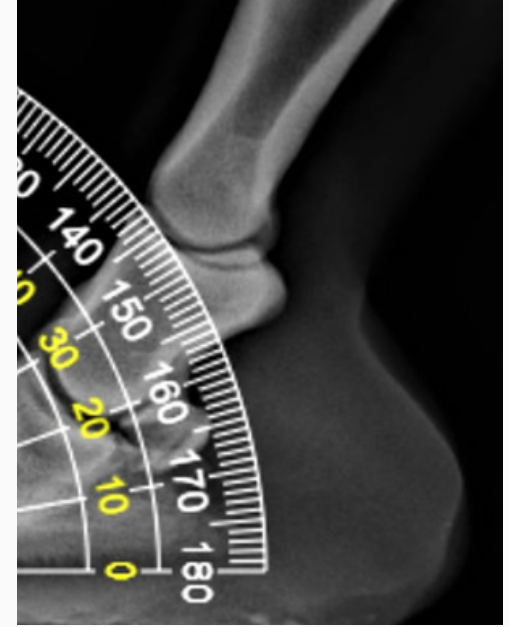

*Some countries we have longer delivery time too, please contact us for exact delivery details.

The shoe is
applied
with a CLICK!

Order the shoe
with name, logo,
color or reflex.

**Together, we can
decrease the injury
statistics**

*For healthy horses and
better hoof quality.*
